

## Commercial Discrete Wirewound Resistors

Axial and Radial Models

### FEATURES

- High precision
- All welded construction
- Molded thermosetting plastic bobbin
- Wide ohmic range combined with tight tolerance
- Excellent long-term stability
- Inherent low temperature coefficient
- Extremely low Thermal EMF
- Low voltage coefficient
- Low noise

|                                    | 505PA  | 9.5 M                                 | 1.00                               |

\* Available in hermetically sealed. See page 7.

### ELECTRICAL SPECIFICATIONS

**Minimum Values:** 0.1 ohm for  $\pm 1\%$  and  $\pm 0.5\%$ .  
10 ohm for  $\pm 0.1\%$  and tighter.

**Resistance Tolerance:**  $\pm 0.005\%$ ,  $\pm 0.01\%$ ,  $\pm 0.02\%$ ,  
 $\pm 0.05\%$ ,  $\pm 0.1\%$ ,  $\pm 0.5\%$ , and  $\pm 1\%$ , depending on style  
and value.

**Temperature Coefficient:**  $\pm 10 \text{ ppm}/^\circ\text{C}$  standard for 10  
ohm and above. Higher T. C.'s on low ohmic values. T. C.  
match to  $\pm 1 \text{ ppm}/^\circ\text{C}$ . High T. C.'s up  
to  $+ 6000 \text{ ppm}/^\circ\text{C}$  are available.

**Standard temperature range:**  $-10^\circ\text{C}$  to  $+ 80^\circ\text{C}$ .

**Working temperature range:**  $-60^\circ\text{C}$  to  $+ 145^\circ\text{C}$ .

### CONSTRUCTION

**All Welded Construction:** The combination of all welded  
construction and compatible materials provide the most  
reliable means of interconnects possible.

**Butt Weld of Tab to Lead:** A tab material of  
800 ohm alloy (the same as the resistance wire)  
is butt welded to the lead and molded deep into  
the resistor bobbin. This design parameter assures the least  
possible D. C. transients due to thermal EMF.

**Bobbin Design:** The ratio of the height of the Pi wall to the  
width of the Pi and to the diameter of the bobbin mandrel  
are critical to the basic stability of a wirewound resistor.  
These parameters are optimized for each wire size, wattage  
size and range of resistor values.

**Encapsulation Material:** Both the bobbin and the final  
encapsulation material are thermosetting alkyd polyester.  
The resulting resistor is virtually a homogeneous mass with  
an identical coefficient of expansion which is unaffected by  
the most violent of temperature cycling. All types are  
unaffected by application of solvents.

**Lead Materials:** The standard lead material is hot solder  
dipped copper (C5N). Other available materials are bare  
nickel (N1N) and gold plated nickel (N2N).
